Objective

Backend Developer with 4+ years of experience building scalable SaaS and enterprise applications using Node.js, Express.js, MongoDB, MySQL, Redis, AWS, and Microservices. Experienced in designing REST APIs, real-time systems with Socket.IO, authentication, background jobs, and cloud services. Strong understanding of system design, database optimization, caching, security, and clean architecture.

Experience

- Appening.co** March 2025 - 07 July 2026
Web Developer
 - Developed scalable backend services for MaidMe Maid Service Management Platform, LOOP Dental SaaS, Mehliia Property Management SaaS and Kargone Used Car Marketplace.
 - Designed REST APIs for multi-role systems using Node.js, Express.js and MongoDB. Implemented JWT authentication, OTP login, Google/Apple Sign-In and RBAC.
 - Built real-time notifications and chat using Socket.IO and Firebase Cloud Messaging. Integrated AWS S3, SendGrid, Apple/Google In-App Purchases and Swagger documentation.
 - Optimized API performance through indexing, Redis caching and query optimization.
- KNNX Corp (DLT Labs), Hyderabad** 1 Jan 2022 - March 2025
Solution Engineer (Solution Engineering & Architect)
 - Developed scalable backend solutions for enterprise applications using Node.js and Express.js.
 - Implemented real-time WebSocket communication for high-performance, event-driven applications.
 - Designed and deployed RESTful APIs with JWT authentication and role-based authorization.
 - Enhanced system performance with Redis caching and asynchronous programming.
 - Conducted code reviews, debugging and error handling (RFC 7807), and performance tuning to ensure reliability.
- Open Sense labs, New Delhi** 15 March 2021 - 15 Sep 2021
Drupal Developer
 - Developed custom themes and templates using Drupal 8 to create responsive UI/UX.

Skills

- Programming Languages: JavaScript (ES6+), Java, Python, typescript
- Backend Development: Node.js, Express.js, GraphQL, Swagger, BullMQ, Cron Jobs, Redis, RabbitMQ
- Databases: MongoDB, MySQL, Redis (caching), PostgreSQL, Mongoose, Aggregation, Indexing, Transaction, Sharding, Normalised, Denormalize, Replication, Prisma ORM
- Authentication & Security: JWT, OAuth, Role-based Access Control, Helmet, Rate Limiting, CORS, Azure key vault, Input Validation, Bcrypt
- Real-Time Communication: WebSockets (Socket.IO)
- Development Practices: Agile, SDLC, REST API Design, Asynchronous Programming, Error Handling & Debugging, Gateway Routing, Event Loop
- Architecture: MVC, Repository Pattern, Service Layer, Clean Architecture, SOLID Design Patterns, Microservices Architecture, Event-driven Architecture
- Tools: Git, GitHub, Bitbucket, Postman, Swagger/OpenAPI

Projects

- Kargone - Used Car Marketplace (Appening.co)**
 - A marketplace that connects car sellers with verified dealers for fast, transparent vehicle sales—covering listings, offers, chat, payments, and admin operations.
 - Developed RESTful APIs for a multi-role car marketplace supporting Seller, Dealer, and Admin modules using Node.js, Express.js, and MongoDB.
 - Implemented JWT & OTP authentication, Role-Based Access Control (RBAC), and secured APIs with Helmet, rate limiting, XSS protection, and request validation.
 - Integrated AWS S3 for vehicle image/document uploads and AWS SES for transactional email

notifications

- Implemented Bull + Redis queues and Cron Jobs for background tasks such as lead allocation, billing, reminders, and scheduled platform operations.
 - Documented REST APIs using Swagger and followed a Controller → Service → Repository architecture for clean, maintainable, and scalable code.
- **Mehlia – Property Management SaaS (Appening.co)**
 - It helps landlords and property managers manage properties, tenants, rent collection, leases, and maintenance from a single platform.
 - Implemented Google/Apple Sign-In, and Role-Based Access Control (RBAC).
 - Built subscription management with plan-based feature, storage, unit, and user limits.
 - Developed real-time landlord–tenant messaging using Socket.IO and push notifications with Firebase Cloud Messaging (FCM).
 - Implemented rent payment, expense tracking, multi-currency financial analytics, and Excel report generation.
 - Automated rent reminders, overdue payment alerts, lease expiration notifications, and background jobs using Bull, Redis, and Cron Jobs.
 - Integrated AWS S3 for document uploads and Apple/Google In-App Purchase (IAP) verification.
 - **LOOP Dental SaaS - Enterprise Practice Management (Appening.Co)**
 - It enables dental clinics to manage appointments, patients, staff, billing, and day-to-day clinic operations in one platform.
 - Compliance: Ensured HIPAA-compliant data handling with encryption, audit logging, and RBAC.
 - Real-time Features: Built a Socket.IO-powered notification system for appointment updates & clinical alerts.
 - API Integrations: Integrated Google Business Reviews API, OAuth2 authentication, and webhook endpoints.
 - Performance: Achieved sub-200ms response times through caching, database indexing, and query optimization.
 - **MaidMe – Maid Service Management Platform (Appening.co)**
 - It connects customers with verified maids for booking housekeeping and cleaning services.
 - Geospatial Services: Developed location-based features using MongoDB geospatial queries.
 - Email & Notifications: Integrated email services (SendGrid) and a notification system for alerts.
 - Multi-language Support: Added i18next for 10+ languages.
 - Security: Implemented comprehensive data security and API protection.
 - Optimization: Achieved high performance with caching, indexing, and optimized schema design.
 - **Wolverine Stride (KNNX Corp)**
 - Developed a backend for invoice generation & bidding with Node.js & Express.js.
 - Implemented secure authentication & authorization (JWT).
 - Integrated MongoDB with optimized queries for efficiency.
 - Automated business process validation with Postman test scripts (JavaScript).
 - Deployed and monitored system on AWS cloud infrastructure.
 - **Wolverine Freight System (KNNX Corp).**
 - Designed event-driven microservices architecture in Node.js & Express.js.
 - Implemented real-time performance tracking using WebSockets.
 - Optimized MongoDB queries & indexing for high-speed retrieval.
 - Enhanced performance using Redis caching and async programming.
 - Built system for horizontal & vertical scalability to handle increasing load.

Education

Course / Degree	School / University	Grade / Score	Year
MCA (Master of Computer Applications)	Madan Mohan Malaviya University of Technology, Gorakhpur	70%	2021
